

welcome to the webcessity newsletter

Hello and welcome to our Summer newsletter!

the best of quirk

This is our section for those things that are a little bit strange... A little bit unusual... Or simply amazing.

A battery-free remote control? Impossible!

I'm sure we can all relate to checking every little-used battery-powered device in the house to prevent us from having to endure the arduous task of manually channel surfing. Well, now according to NEC this problem is a thing of the past!

Not only does this spiffy little invention not need to be powered by batteries, but it actually GENERATES electricity through its use!

Surely it's revolutionary. Have a read about it [here](#).

what's that?

This section will feature our little A to Z on all things web.

B is for byte

We've all heard of bytes - whether it's a kilobyte (KB), megabyte (MB) or gigabyte (GB). They dictate your email inbox size, your internet browsing capabilities and even your computer hard drive size.

The similarity between all these forums - information. A byte is a unit of digital information, made up of bits.

The size of the information can be determined with the following simple rules:

Decimal		
Value		SI
1000	k	kilo
1000 ²	M	mega
1000 ³	G	giga

It usually pays to find out your byte limits for your various online activities. Not only can it keep you aware of your limits, but it can also prevent some unneeded headaches. For

example, most internet service providers have a limit on the size of an email you can send through them. Finding out what this limit is can prevent your data being lost into the internet abyss.

If you are having troubles such as emails being too large, why not try sites such as MediaFire or YouSendIt.

tips tricks

Browser Wars

Just recently Google have released their Google Chrome internet browser to compete with Mozilla Firefox, Apple Safari, Opera and Internet Explorer.

The significance of this lies within Google's other new creation - Google Wave, which will not work if being viewed from an Internet Explorer browser! This is a bold step from the search giant, possibly cutting off a large portion of their audience, as IE is still the worlds most popular internet browser. Is this a call to arms from one giant to the other? We hope so!

Due to the advancements of all other browsers over internet explorer, here at Webcessity we recommend using Mozilla Firefox or Google Chrome for a safer and more easy and interactive internet browsing journey.
